Infrared Thermometers

214

When your job calls for leading-edge temperature-measurement technology, 3M provides the solution with its family of 3M™ Infrared Thermometers and Data Communications and Coax Cable Detection Instruments.

## Infrared Thermometers

These units provide a fast, easy and accurate way to measure a wide range of temperatures at a safe distance. Plant engineers and technicians can now monitor equipment more closely, more accurately and more often—helping to spot trouble before it leads to costly malfunction and repair.

For general, commercial and professional use, 3M offers a wide range of models to meet your preventative maintenance requirements.

## Repair and Calibration

The purpose of this communication is to notify you of a change in the way we handle repair and calibration of heat tracers in the US. In the past, 3M orchestrated all repair and calibration requests through Austin. In the future, customers will deal directly with a 3M Authorized Repair and Calibration Center. The contact phone number will be 888-993-5853. This repair center is located in Everett, Wash., and will be able to provide all the same services that 3M provided in the past, including repair, calibration, NIST certification and spare parts. After contacting the repair center, customers will be advised on cost, time for repair and any other information they require.

# Infrared Thermometers

The 3M™ Infrared Thermometer is a rugged, highly accurate and easy-to-use, portable, non-contact (infrared) thermometer. It is an invaluable tool for monitoring operating temperatures of mechanical and electrical, plant and production equipment without removing the equipment from service.

The infrared thermometer allows the electrician and/or technician to locate and identify overheating conditions in electrical wiring connections, panels, switchgear, motors and mechanical equipment, and to perform preventative maintenance before catastrophic failure occurs.
