### Introduction

Ruland Manufacturing Co., Inc. has been supplying carefully made products since 1937. We have manufactured everything from bicycle pumps to high pressure valves, including the valve that pressurized the spacesuit of the first American to walk in space. In recent years, all of our expertise has been devoted to making the best shaft collars and couplings available. Bellows couplings are just one design in the full line of motion control couplings manufactured by Ruland (see back cover).

them ideal in high performance applications that require a high

degree of accuracy and repeatability.

#### **ORDERING INFORMATION**

Choose any bore **b1** and any bore **b2** available in a body size. Part numbers are in the following format with numbers representing inches:

- **Note 1** Static torque ratings are at maximum misalignment. To obtain dynamic rating, static ratings should be divided by 2 for non-reversing applications and by 4 for reversing applications.
- Note 2 Hardware is alloy steel with black oxide finish. Parts BS10, BS12, MBS15 and MBS19 have one set screw on each end. BS16, BS21, BS26, BS32, MBS25, MBS33, MBS41 and MBS51 have two set screws 90° apart.
- Note 3 Performance ratings are for guidance only. The user must determine suitability for a particular application.
- Note 4 Couplings supplied with aluminum hubs. Stainless steel hubs available upon request.

#### **Installation Instructions**

- 1. Assure that the misalignment between shafts is within the coupling's ratings.
- 2. Align both hubs of the coupling on the shafts that are to be joined.
- 3. Fully tighten the screw(s) on one hub to their recommended seating torque (see charts above).
- 4. Before tightening the screw(s) on the second hub, rotate the coupling by hand to allow it to reach its free length.
- Tighten the hub on the second shaft such that the misalignment angle remains centered along the length of the coupling and the coupling remains axially relaxed.
