

POWDER COATING

Plastic coating fused on properly prepared metal parts.

Nylok offers POWDER COATING.

Nylok POWDER COATINGS offer these distinct advantages:

- Decorative
- Prevent metal-to-metal contact and provide some wear resistance
- Protect sharp metal parts from cutting
- Rust prevention
- Prevents galvanic corrosion between dissimilar materials

INNOVATION & POWDER COATINGS.

Innovation is Nylok's word for our way of developing new products that solve challenges our customers face.

Nylok POWDER COATINGS were developed to provide manufacturers with a plastic coating that prevents rust, corrosion and wear caused by metal-to-metal contact.

If it's new, it's Nylok.

At Nylok, we perform thousands of product engineering tests and simulations each year. These continuing efforts have resulted in the largest number of patents for products, processes and equipment in the field of fastener technology.

Recommendations from Nylok engineers have saved customers thousands of dollars. Many companies have experienced the value of working with us early in the design stage. How much time and/or money can Nylok innovation save you? Why not find out for yourself by calling us in on your next project.

The earlier, the better.
