CUSTOM PARTS

Get custom parts from reliable, cost effective, ISO-qualified suppliers. Custom capabilities include:

- Cold headed components
- Springs and wire forms
- Deep drawn parts
- Exotic metals
- Hot heading
- Military and aerospace
- Plastic and rubber molded parts
- Powdered metal parts
- Prototypes
- Coatings and plating
- Stampings
- Screw machining

KITTING/BAGGING

Save the time and cost of ordering, collating and tracking the same parts over and over again. Customize kits with:

- Labels (bar codes, logo, shelf locations, parts, etc.)
- Packaging (boxes, heat sealed or re-closable bags)
- Non-standard kit items
- Multi-level assemblies
- Machining or plating

VENDOR INVENTORY MANAGEMENT (VMI)

Have the parts you need at all times, with no need to overstock! Dedicated VMI specialists will regularly visit your facility, scan and replenish your inventory. Here's what they'll do for you:

- Design a stocking plan
- Barcode all bins and locations
- Deliver product on schedule
- Track inventory levels
- Ensure you don't run out and aren't overstocked
- Review management reports with you

85%
of your fastener costs are likely related to
INVENTORY OVERHEAD

A VMI program will help save costs by streamlining supply chain operations, improving inventory turns, and increasing sales.

MILITARY/AIRCRAFT HARDWARE & OTHER INNOVATIVE FASTENING SOLUTIONS

REGULATION & DOCUMENTATION MANAGEMENT

Compliance is critically important for the success of your business. As an industry leader in global compliance, we'll help you collect, interpret and manage the compliance data from raw materials to finished products. Below you'll find the major compliance issues we help address.

CONFLICT MINERALS

Natural resources extracted in a conflict zone and sold to perpetuate the fighting. For example, various armies, rebel groups, and outside actors have profited while contributing to violence and exploitation in the Democratic Republic of the Congo. Commonly mined conflict minerals extracted from the Eastern Congo include cassiterite (for tin), wolframite (for tungsten), coltan (for tantalum), and gold ore. These pass through a variety of intermediaries before being purchased by multinational electronics companies.

RoHS
Restriction of Hazardous Substances
Restricts certain dangerous substances commonly used in electronics and electronic equipment.

- Cadmium (Cd), and Hexavalent chromium (Hex-Cr) levels must be less than 0.01% of the substance by weight at raw homogeneous materials level.
- Lead (Pb), Polybrominated biphenyls (PBB), Polybrominated diphenyl ethers (PBDE) levels must be no more than 0.1% of the materials by weight at raw homogeneous materials level.
- Mercury (Hg) levels must be 100 ppm or less and must not have been intentionally added.

REACH
Registration, Evaluation, Authorization, and Restriction of Chemicals
European Union regulation that addresses the production and use of chemical substances and their potential impacts on both health and the environment.

WEEE
Waste Electrical and Electronic Equipment Directive
European Community directive that sets collection, recycling and recovery targets for all types of electrical goods.

DFARS
Defense Federal Acquisition Regulation Supplement
The DFARS for Domestic Specialty Metals, Alt 1 requires specialty metals be melted in the US or a qualifying country. Qualifying countries can manufacture parts from metal melted anywhere if it meets specifications, but a US company can only use metal melted in the US or a qualifying country. As of this document's date, qualifying countries are Australia, Belgium, Canada, Denmark, Egypt, Germany, France, Greece, Israel, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and Northern Island.

SDS, MSDS, OR PSDS
Safety Data Sheet, Materials Safety Data Sheet, Product Safety Data Sheet
Procedures for safely handling or working with a substance. Includes physical data (melting point, boiling point, flash point, etc.), toxicity, health effects, first aid, reactivity, storage, disposal, protective equipment, and spill-handling.

ITAR AND EAR
International Traffic in Arms Regulations and Export Administration Regulations
United States export control laws that affect the manufacturing, sales and distribution of technology.

NAFTA
North American Free Trade Agreement
Used by Canada, Mexico, Puerto Rico, and the US to determine if imported goods receive reduced or eliminated duty.

COUNTERFEIT PARTS
Detection and avoidance of counterfeit electronic parts.

PPAP
Production Part Approval Process
Automotive supply chain standards verification for component suppliers and their production processes.

ISO
Our ISO 9001-2015 certificate allows us to provide custom inspections.

PROP65
Proposition 65 (Safe Drinking Water and Toxic Enforcement Act of 1986)
Protects the public from toxic chemicals in drinking water, exposure to chemicals in products sold in California (CA), and hazards potentially present in CA work environments. The state of CA publishes a list of toxic chemicals that may affect reproductive health, and those known to cause cancer and birth defects. Companies operating or selling in California must notify the public of the presence of these chemicals above the legal thresholds prior to purchase.

TSCA
Toxic Substances Control Act of 1976
Regulates the manufacture, import, distribution, use, and disposal of new and existing chemicals in US commerce to reduce hazardous exposures and environmental pollution. Restricts the use of substances, including asbestos, polychlorinated biphenyls (PCBs), dioxins, radon, metallic mercury, lead-based paint, and certain flame retardants.

IMDS
International Material Data System
Automotive industry's materials data system used to collect, maintain and analyze manufacturing data to ensure they meet domestic and international standards, laws and regulations.
